IPC-4821

Specification for Embedded Passive Device Capacitor Materials for Rigid and Multilayer Printed Boards

Developed by the Embedded Component Materials Subcommittee (D-52) of the Embedded Components Committee (D-50) of IPC

Users of this publication are encouraged to participate in the development of future revisions.

Foreword:

IPC-4821 was developed based on industry knowledge at the time. Embedded passive devices may be made with a large variety of materials and cover a wide range of fabrication processes. At the time of writing this specification, use of these materials was not widespread. As such, it is anticipated that updates to this document will be needed in the future. In the meantime, it is recommended that the customer and supplier work together to set the criteria for acceptance of embedded passive material products.

Table of Contents

1	SCOPE	1	3.9	General Acceptability	8
1.1	General	1	3.9.1	General Acceptability of Dielectric Materials	8
1.2	Designation System	2	3.9.2	General Acceptability of Conductive Materials	8
1.2.1	Embedded Capacitor Passive Device Designations	3	3.9.3	Inspection	8
2	APPLICABLE DOCUMENTS	4	3.9.3.1	Inspection Lot	8
2.1	IPC	4	3.9.3.2	Preparation of Samples	9
2.2	American Society for Testing and Materials (ASTM)	4	3.9.3.3	Standard Laboratory Conditions	9
2.3	Underwriters Laboratories (UL)	4	3.10	Visual Requirements	9
2.4	National Conference of Standards Laboratories (NCSL)	4	3.10.1	Visual Requirements of Laminate-Like Capacitor Materials	9
2.5	International Organization for Standardization	4	3.10.1.1	Metal Indentations	9
2.6	International Electrotechnical Commission	4	3.10.1.2	Scratches	9
3	REQUIREMENTS	5	3.10.1.3	Surface Finish of Foil after Curing - Except Double Treat	9
3.1	Terms and Definitions	5	3.10.1.4	Wrinkles and Creases	9
3.1.1	Embedded Planar Capacitor	5	3.10.1.5	Surface and Subsurface Imperfections	9
3.1.2	Embedded Discrete Capacitor	5	3.10.1.5.1	Inclusions	10
3.2	Specification Sheets	5	3.10.1.5.2	Voids, Cracks or Pin Holes	10
3.3	Supplier's Quality Profile	5	3.10.1.6	Tears and Delaminations	10
3.4	Qualification (Characterization) Testing	5	3.10.2	Visual Requirements of Nonlaminat- Like Capacitor Materials	10
3.4.1	Material Qualification	5	3.10.2.1	Foreign Material	10
3.4.1.1	Samples	5	3.10.2.2	Voids or Pin Holes	10
3.4.1.2	Frequency	5	3.10.2.3	Delaminations	10
3.4.1.3	Production Board Qualification Assessment of Materials	5	3.11	Dimensional Requirements	10
3.5	Conformance Testing	5	3.11.1	Dimensional Requirements of Laminate- Like Capacitor Materials	10
3.5.1	Samples	7	3.11.1.1	Thickness	10
3.5.2	Frequency	7	3.11.1.2	Dimensional Stability	10
3.6	Verification of Supplier's Quality System	7	3.11.1.3	Metal Conductor Weight	11
3.7	Conflict	8	3.12	Mechanical Requirements	11
3.8	Materials		3.12.1	Mechanical Requirements of Laminate- Like Capacitor Materials	11
3.8.1	Capacitor Materials in Laminate- Like Form	8	3.12.1.1	Peel Strength	11
3.8.2	Capacitor Materials in Nonlaminat- Like Form	8	3.12.1.2	Bow and Twist	11
3.8.3	Encapsulant Materials in Nonlaminat- Like Form	8	3.12.1.3	Glass Transition Temperature (T_g)	11
3.8.4	Conductor/Termination Materials	8	3.12.1.4	CTE Above and Below the T_g	11
3.8.4.1	Copper Foil or Other Metal	8	3.12.2	Mechanical Requirements of Nonlaminat-Like Capacitor Materials	11
3.8.4.2	Plated Copper	8	3.12.2.1	Adhesion	11
3.8.4.3	Conductive Paste	8	3.12.2.2	Glass Transition Temperature, T_g	11
3.8.4.4	Other Plated Metals	8	3.12.2.3	CTE Above and Below T_g	12
			3.12.2.4	Viscosity	12

Specification for Embedded Passive Device Capacitor Materials for Rigid and Multilayer Printed Boards

1 SCOPE

This document describes materials that can be used for the fabrication of embedded passive capacitor devices within the finished printed circuit board substrate. For this document, embedded passive devices and the phrase embedded passives are considered to be equivalent. It provides information on general designations and associated characteristics of embedded passive device (EPD) capacitor materials. The document **shall** be used as a qualification and conformance standard for these materials.

This document contains material designation, conformance (requirements), qualification (characterization) and quality assurance specifications. IPC-4821 **shall** be used in conjunction with IPC-2000 series design standards and IPC-6000 series performance standards.

Embedded passive resistor material designation, conformance (requirements), qualification (characterization) and quality assurance specifications are contained in IPC-4811.

1.1 General This document covers the requirements for dielectric, conductive, and insulating materials that are used with materials for the manufacture of printed circuit boards containing embedded passive capacitor functionality. Figures 1-1a & 1-1b show representations of how embedded passives may appear in a PWB.

- Embedded passives are used to enhance high speed, high frequency performance.

- Embedded passives are used to increase circuit density and simplify design of circuitry features such as decoupling capacitance and terminating resistors.
- Embedded passives are used to simplify assembly by mounting fewer components, thereby increasing functionality and/or reducing total board area.
